DETAILED ACTION

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with David Connor on January 21, 2010.

The application has been amended as follows: Please cancel claims 4 - 9, 11, 14, 15, 18, and 19

Allowable Subject Matter

Claims 1- 3 are allowed with Claim 1 being independent.

The following is an examiner's statement of reasons for allowance: The prior art alone or in combination does not disclose a bind processing method where symmetrical driving pairs of pushers close division rings of a binder at their forward end portions within punched holes of sheets where the binder has been separated from a stack of binders.

As discussed in the Office Action of October 23, 2009, Fabrig discloses of the bind processing method where a binding element is placed between two symmetrical driving pairs of pushers that close first and second ring portions of a binder having ring portions at regular intervals along a spine portion. The rings are further shown to close within the holes of a sheet stack, however Fabrig is not teaching of the spine being a rectangular bar like spine.

The art of Amdahl was shown to provide the bar like spine with the ring portions at regular intervals that do require pushing of each ring portion to meet one another and where the binding element is placed into a binding machine. Amdahl is showing that there are stacks of binding elements however there is no disclosure of the separating and how they are bound.

Fabrig further discloses that a wire portion is fed to bending stations to where loops are formed and then a severing station cuts the binding strip to have a particular amount of binding elements in the binder (Column 5, Lines 59 – 68) and then transported to an opening station for spreading the strips (Column 6, Lines 1—10) and then pushed at the pushers. Fabrig is clearly teaching away from separating a binder away from a stack of a plurality of binders to where that binder is used to bind the papers because Fabrig is creating the binder which is then directly taken into the binding process. There is no separating of a binder from any type of stack because it is made away from a stack. Amdahl does show the stacks of binding rings however combining this stack into the invention of Fabrig is not proper as Fabrig is making of a wire element while Amdahl has a different binding element. Such a combination would destroy the workability of Fabrig and Amdahl being modified is not entirely proper as the binding machine method and the method for separating binding elements are not discussed appropriately enough to say that Amdahl can be modified by have pushers like that of Fabrig.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
